# TOP RAIL TIE (TRT)

## WHAT DOES THE TOP RAIL TIE (TRT) DO?

- Replaces rail notching or keeper screws.
- Distributes undue stress from the top rail to the strongest part of the post.
- Eliminates post failures at the routed holes from incorrect stressing.

## WHAT CAN THE TRT DO FOR YOU?

- When you install your fence the bottom rail will not come out because it is held secure between the pipe. The upper rail still needs to be secured and the TRT fixes this problem for you.
- The TRT eliminates the need for notching which takes time and makes for very difficult disassembly if ever required, especially in cool climates.
- Adds a professional finish to the top rail adjustments.

Our TRT allows you to install vinyl fence without causing undue stress on the post by securely fastening the top rail within a PVC post.
